Partial Differential Equations and Boundary Value Problems
Nakhle Asmar

Table of Contents

1. A Preview of Applications and Techniques
   1.1 What is a Partial Differential Equations ?
   1.2 Solving and Interpreting a Partial Differential Equations
2. Fourier Series
   2.1 Periodic Functions
   2.2 Fourier Series
   2.3 Fourier Series of Functions with Arbitrary Periods
   2.4 Half-Range Expansions: the Cosine and Sine Series
   2.5 Mean Square Approximation and Parseval's Identity
   2.6 Complex Form of Fourier Series
   2.7 Uniform Convergence of Sequences and Series of Functions
   2.8 Dirichlet Test and Convergence of Fourier Series
3. Partial Differential Equations in Rectangular Coordinates
   3.1 Partial Differential Equations in Physics and Engineering
   3.2 Modeling: Vibrating Strings and the Wave Equations
   3.3 Solution of the One Dimensional Wave Equation: the Method of Separation of Variables
   3.4 D'Alembert Method
   3.5 The One Dimensional Heat Equation
   3.6 Heat Conduction in Bars: Varying the Boundary Conditions
   3.7 The Two Dimensional Wave and Heat Equations
   3.8 Laplace's Equation in Rectangular Coordinates
   3.9 Poisson's Equation: The Method of Eigenfunction Expansions
   3.10 The Maximum Principle
4. Partial Differential Equations in Polar and Cylindrical Coordinates
   4.1 The Laplacian in Various Coordinate Systems
   4.2 Vibrations of a Circular Membrane: Symmetric Case
   4.3 Vibrations of a Circular Membrane: General Case
   4.4 Steady-State Temperature in a Disk
   4.5 Heat Conduction in Bars: Varying the Boundary Conditions
   4.6 The Two Dimensional Wave and Heat Equations
   4.7 Bessel's Equation and Bessel Functions
   4.8 Bessel Series Expansions

5. Partial Differential Equations in Spherical Coordinates

   5.1 Preview of Problems and Methods

   5.2 Dirichlet Problems with Symmetry

   5.3 Spherical Harmonics and the General Dirichlet Problem

   5.4 The Helmholtz Equation with Applications to the Poisson, Heat, and Wave Equations

   5.5 Lenegdre's Differential Equation

   5.6 Legendre Polynomials and Legendre Series Expansions

   5.7 Associated Legendre Functions and Series Expansions

6. Sturm-Liouville Theory with Engineering Applications

   6.1 Orthogonal Functions

   6.2 Sturm-Liouville Theory

   6.3 The Hanging Chain

   6.4 Fourth Order Sturm-Liouville Theory

   6.5 Elastic Vibrations and Buckling of Beams

7. The Fourier Transform and its Applications

   7.1 The Fourier Integral Representation

   7.2 The Fourier Transform

   7.3 The Fourier Transform Method

   7.4 The Heat Equation and Gauss's Kernel

   7.5 A Dirichlet Problem and the Poisson Integral Formula

   7.6 The Fourier Cosine and Sine Transforms

   7.7 Problems Involving Semi-Infinite Intervals

8. The Laplace and Hankel Transform with Applications

   8.1 The Laplace Transform

   8.2 Further Properties of the Laplace Transform

   8.3 The Laplace Transform Method

   8.4 The Hankel Transform with Applications

9. Finite Difference Numerical Methods

   9.1 The Finite Difference Method for the Heat Equation

   9.2 The Finite Difference Method for the Wave Equation

   9.3 The Finite Difference Method for the Laplace Equation

   9.4 Iteration Methods for Laplace's Equation

10. Sampling and Discrete Fourier Analysis with Applications to Partial Differential Equations

   10.1 The Sampling Theorem

10.2 Partial Differential Equations and the Sampling Theorem
10.3 The Discrete and Fast Fourier Transforms
10.4 The Fourier and Discrete Fourier Transforms

11. An Introduction to Quantum Mechanics

11.1 Schrödinger's Equation
11.2 The Hydrogen Atom
11.3 Heisenberg's Uncertanity Principle
11.4 Hermite and Laguerre Polynomials
